(406) 444-6601 WATER MANAGEMENT BUREAU  
(406) 444-6610 WATER RIGHTS BUREAU

HELENA, MONTANA 59620

July 1984

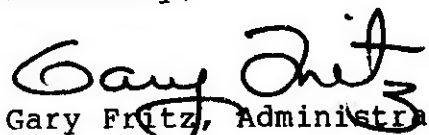

This river mile index of the Columbia River Basin (Clark Fork and Kootenai Rivers) is the third in a series being published by the Department of Natural Resources and Conservation. Eventually, we hope to include in these indexes all rivers and streams in the state. The indexes for the Yellowstone and Missouri River basins were published in 1976 and 1979, respectively, and work on the Little Missouri River Basin will be underway in the near future. The department believes that measurement by river miles is the most practical method of measurement along waterways for such purposes as water rights description and scientific investigation, among many others. These indexes are made available in the hope that they will become a standard by which agencies and individuals can establish measurements by river mile without fear of error or misinterpretation.

Measurements were made following the procedures and suggestions set forth in River Mileage Measurement, Hydrology Committee Bulletin No. 14 of the Water Resources Council (Washington D.C., 1968). Mileages were derived from U.S. Geological Survey topographical maps. One hundred percent of the basin has topographical map coverage (1: 24,000 and 1: 62,500).

All distances in the index (given to the nearest tenth of a mile) were measured from the mouth upstream. The designation "R" or "L" behind the mileage number refers to "right bank" or "left bank." This designation identifies the feature's position in relation to the main stream as it would appear to an observer facing downstream.

The index was compiled by Melvin F. McBeath, Water Resource Specialist with DNRC's Engineering Bureau, and typed by Laurie Zeller and Cindy Forgey.

Sincerely,

  
Gary Fritz, Administrator  
Water Resources Division
